

ABSTRACT

1 This invention comprises a two part audio system in which
2 all of the processing power is allocated to a small,
3 lightweight satellite part that is the face unit. Mass
4 storage, amplification, and wired power for recharging the
5 face unit is provided by the other part, the base. The base
6 runs either from a 120 volts AC source or 12 volts DC. The
7 face unit contains a small amount of flash memory making it
8 capable of carrying music normally stored on two or more
9 compact discs (CDS).
